PROFILE SUMMARY

Aspiring Software Engineer with expertise in Java Backend Development and a solid understanding of Java, Spring Boot, RESTful APIs, Spring Data JPA, and PostgreSQL. Skilled in developing backend applications, designing scalable REST APIs, implementing CRUD operations, and following layered architecture principles. A quick learner with excellent analytical and problem-solving skills, dedicated to building reliable and efficient software solutions.

SKILLS

Languages: Java

Frameworks: Spring Boot, Spring Data JPA, REST APIs, WebClient

Databases: MySQL, PostgreSQL

DevOps & Tools: Postman, Insomnia, GitHub

Core Concepts: Data Structures & Algorithms, REST API Design

INTERNSHIP

LLM Post Training Intern — Ethara AI

- Worked on Large Language Model (LLM) post-training workflows, including data annotation, evaluation, and response quality improvement.
- Evaluated and improved model outputs based on correctness, coherence, and alignment with human expectations.
- Followed structured quality guidelines and collaborated with Quality Leads to ensure consistent model performance.
- Performed error analysis and feedback iteration to enhance LLM response accuracy and reliability.

PROJECTS

Hospital Management System

java, Spring Boot, REST APIs, Spring Data JPA, postgresQL

- Designed and developed a scalable healthcare management backend using Java and Spring Boot, implementing Patients, Doctors, Appointments, and Billing modules with a layered architecture (Controller, Service, Repository).
- Built and exposed RESTful APIs with complete CRUD functionality using Spring Data JPA and PostgreSQL, ensuring efficient data persistence and optimized database interactions.
- Implemented business logic in the service layer, leveraged dependency injection for loose coupling, and followed REST principles to create maintainable and production-ready backend services.
- Integrated the backend with a React frontend through REST APIs, configured CORS for secure cross-origin communication, and validated API functionality using Postman.

Nexus Subscription Center

Java, Spring Boot, Spring Data JPA, PostgreSQL, REST APIs

- Designed and developed a modular subscription management backend using Java, Spring Boot, and PostgreSQL, following a layered architecture (Controller, Service, Repository) to ensure clean separation of concerns and maintainability.
- Built RESTful APIs with Spring Data JPA to perform CRUD operations, implementing business logic for subscription lifecycle management including renewals, status updates, and soft deletion.
- Implemented business logic in the service layer for subscription management, including renewal processing, status updates, and subscription lifecycle operations.
- Developed analytics and dashboard services by aggregating subscription data to provide insights such as active subscriptions, monthly/yearly expenditure, upcoming renewals, and subscription cost statistics.

EDUCATION

Institute of Aeronautical Engineering, Hyderabad

May 2026

B.Tech in Computer Science and Engineering (AI & ML)

GPA: 7.92/10

CERTIFICATIONS

- Agentforce Specialist – Salesforce
- Java Full Stack – Wipro
