## EDUCATION

**Institute of Aeronautical Engineering, Hyderabad**  
B.Tech in Computer Science and Engineering (AI & ML)

May 2026  
GPA: 7.94/10

**Sri Chaithanya Junior College, Hyderabad**  
Intermediate Education

Jun 2022  
95.3%

**CARMEL High School, Mancherla**  
Secondary Education

Mar 2020  
GPA: 9.8/10

## TECHNICAL SKILLS

**Languages:** Java

**Frameworks & Databases:** Spring Boot, Microservices, MySQL, PostgreSQL

**Tools & Platforms:** Postman, Insomnia, Git, Selenium (Automation Testing)

**Testing:** Selenium Automation Testing

## EXPERIENCE

**LLM Post Training Intern — Ethara AI**  
Remote

Jan 2026 – Apr 2026

- Worked on Large Language Model (LLM) post-training workflows, including data annotation, evaluation, and response quality improvement.
- Evaluated and improved model outputs based on correctness, coherence, and alignment with human expectations.
- Followed structured quality guidelines and collaborated with Quality Leads to ensure consistent model performance.
- Performed error analysis and feedback iteration to enhance LLM response accuracy and reliability.

## PROJECTS

**Hospital Management System (Backend)**  
Spring Boot, REST APIs, JPA/Hibernate, Docker

Apr 2026  
[GitHub](#) — [Live Demo](#)

- Developed a scalable Spring Boot backend for managing hospital operations including patients, doctors, appointments, and billing.
- Designed and implemented RESTful APIs following MVC architecture to handle CRUD operations and business logic.
- Containerized the application using Docker for consistent deployment across environments.

**PulseFit – Microservices-Based Fitness Tracking Platform**  
Spring Boot, Spring Cloud Gateway, Kafka, Keycloak, OAuth2, React, MongoDB, PostgreSQL, Docker

Feb 2026  
[GitHub](#)

- Designed and developed a production-grade fitness tracking platform using microservices architecture with Spring Boot, enabling independent service scaling and modular development.
- Implemented secure authentication and authorization using Keycloak (OAuth2 + PKCE) with JWT-based API protection via Spring Cloud Gateway.
- Built event-driven communication between services using Apache Kafka, improving system decoupling and real-time data processing.

**MoodFlix – AI Movie Recommendation System (Backend)**  
Spring Boot, Gemini API, WebClient, PostgreSQL, JPA/Hibernate, Selenium

Dec 2025  
[GitHub](#) — [Live Demo](#)

- Engineered a Spring Boot backend integrating Google Gemini API to generate personalized movie recommendations based on user mood and interaction history.
- Designed RESTful APIs with layered architecture (Controller, Service, Repository) and implemented DTO mapping for clean data transfer.
- Implemented backend testing using Selenium to validate end-to-end API workflows and ensure system reliability.

## Upcoming PUBLICATIONS

**Fraud Detection in Fastag Payments**

[Publication Certificate](#) — [Presentation Certificate](#)

## CERTIFICATIONS

Agentforce Specialist – Salesforce ([Link](#))

Mar 2025

AI Foundations Associate – Oracle ([Link](#))

Apr 2025

Java Full Stack – Wipro ([Link](#))

Oct 2025

## CODING PROFILES

**Code360:** 300+ problems

**LeetCode:** 250+ problems solved — 50-Day Badge
